City of Springs

City of Springs is an interesting side-scroller released in 2015. It drew a lot of attention, and the game got a cult following. You know that the game uses a special game pad, which uses two analog sticks and triggers to move your character, just like you do with a controller. The game itself is divided into a short tutorial and the main game. The first parts of the tutorial show you, what the game is all about and teach you some controls. At the end of the tutorial, the game has you start the main level, with the goal: Escape the city. A city that seems to be located somewhere in the mountains from the screenshots. However, the game offers up to three modes: Classic is the classic mode, and is available in the tutorial. It consists of 8 block-box levels with traps and never seen this before enemies.
