## ZWT WinAll.Scanners.C

### **KeySpy.v7.91.WinALL.Regged-BLiZZARD Full Version**

A: Do you have anything on your PC with Internet access? That is, do you have any kind of web-browser installed, such as Internet Explorer, Safari, Chrome, Firefox, etc.? If so, go to Control Panel and click on "Programs and Features". Locate any "Internet Download Manager" or "File and Print Sharing Center" or "Transfer Speedup" and then select Uninstall under the Installed items heading. Remove the software, restart your PC and see if the problem persists.

Q: Worklight 7.1 to Deploy to testflight I try to deploy my new Worklight 7.1 app. But when I deploy it to my iPhone the app works. But if I deploy the app to my testflight it doesn't work. I don't have any error message. I think that the problem is that I have to use a token on my testflight account. Here are the steps I do to deploy:

1. git clone -b develop the project
2. cd app
3. wlapp deploy -d ios -p mypassword
4. xcodebuild -project [wlp file] -scheme [scheme file] -configuration [configuration file] -archivePath [wlp file]/build/device-ios.xcarchive

---

-parallelizeBuilds YES -archivePath [Build/[configuration file]]/[wlp file]/build/device-ios.xarchive In the xcodebuild, I'm also using a token in the build command. I already read the docs in the IBM website but I don't find any useful solution. Is there someone who can help me? Thank you.

A: I finally found the solution. The problem was that the build was right but I had to pass the account with token. Here are the steps that I do: 1. git clone -b develop the project 2. cd app 3. wlapp deploy -d ios -p mypassword 4. xcodebuild -project [wlp file] -scheme [scheme file] -configuration [configuration file] -archivePath [wlp file]/build/device-ios.xcarchive -parallelizeBuilds YES -token [username\_password] -archivePath [Build/[configuration file]]/[wlp file]/build/device-ios.xcarchive
